ApnoMart Sales Dashboard — Business Insights

Prepared by: Gouthami Mandapelli
Role: ApnoAI Data Analytics Intern
Date: October 2026

Executive Summary

The ApnoMart sales dashboard provides an overview of sales performance, profit, orders, product categories, regional profitability, and customer purchasing behavior. The dashboard reports total sales of **16.26M**, total profit of **4.42M**, approximately **1,200 orders**, and an average profit margin of **27.18%**.

These metrics help the business understand its overall performance and identify opportunities to improve sales and profitability.

Strategic Insights

Insight 1: Revenue Performance by Category

The Sales by Category chart shows differences in sales across product categories. Furniture and Office Supplies appear to be among the stronger categories, while Electronics presents an opportunity for further investigation.

Business impact: Understanding which categories contribute most to sales can help ApnoMart plan inventory and allocate marketing resources more effectively.

Suggested action: Maintain sufficient stock for strong-performing categories and investigate pricing, demand, and promotional opportunities in categories with comparatively lower sales.

Insight 2: Profitability by Region

The Profit by Region chart shows that profitability varies across regions. This suggests that sales volume, product mix, operating costs, or discounting may differ between locations.

Business impact: Comparing regional performance can help the business identify where profit is strongest and where improvements may be needed.

Suggested action: Review regional sales, costs, product mix, and discounts to understand the reasons for differences in profitability. Share successful practices from stronger-performing regions where appropriate.

Insight 3: Customer Purchasing Behavior

The dashboard includes customer-segment and payment-method information. The visible figures indicate that the Corporate segment contributes meaningful sales, while other customer segments also provide opportunities for growth. Cash and debit card are among the payment methods used by customers.

Business impact: Understanding customer segments and payment preferences can help ApnoMart improve its marketing and shopping experience.

Suggested action: Strengthen relationships with existing business customers, develop targeted offers for other customer segments, and continue providing convenient payment options.

Strategic Recommendation

ApnoMart should focus on improving profitable growth by combining category-level sales analysis, regional profit monitoring, and customer-segment analysis.

The business should maintain inventory for strong-performing categories, investigate regional differences in profit, and use customer insights to develop targeted marketing campaigns. Management should also monitor monthly sales and profit trends to identify changes in performance and support better planning.

These actions can help ApnoMart make data-driven decisions, improve resource allocation, and strengthen overall business performance.

Conclusion

The Power BI dashboard transforms sales data into useful business information through KPI cards, charts, and interactive slicers. It allows users to explore performance by month, region, and category.

By regularly reviewing these metrics and acting on the insights, ApnoMart can make more informed decisions about sales, profitability, inventory, and customer engagement.
